# Altaro Backup FS

Altaro Backup FS is the perfect & affordable premium backup solution for professionals and small & mid- sized businesses looking to protect their Windows Servers and PCs from data loss.

✅ Continuous Data Protection (CDP)

Highly tuned file-change-detection technology makes sure that you are protected at all times.

✅ Backs up Open Files

Integrates with MS Volume Shadow (VSS) to back up files that are in use such as PST files, etc.

✅ BackInTime Technology

Using the BackInTime browser it takes seconds to find and restore a file from any point in time.

✅ Unattended Backups

Runs as a Windows service - ideal for unattended servers. Backs up even when users are not logged in.

ReverseDelta Incremental Technology

ReverseDelta is technology developed by Altaro Software that enables Altaro Backup FS to only save the changes between each version of a changed file, rather than storing the whole file every time it changes.

Most backup solutions keep the first backup and save the changes (deltas) since that first backup, which, after a few weeks or months can become much more complex to restore.

With ReverseDelta, the most recent backup is always a full file. This means that if you require the latest version of a file, it is possible to access it directly from your backup drive without having to rebuild it from delta files.

Altaro Backup FS

Premium backup solution for professionals and SMBs

✔ **Restore Files through Email**

With Altaro Backup FS you have the option to send a copy of the restored files to employees via email automatically - wherever they are in the world.

✔ **Email Notifications on Backup Success or Failure**

Receive email reports when a backup takes place. Providing peace of mind knowing that all your data is backed up.

✔ **Double-Protection with Backup Drive Redundancy**

Automatically keep a double-backup to protect against theft, fire or loss of your backup drive.

Licensing

Altaro Backup FS is licensed per server or PC. This means that if you install it on 1 file server then you only need 1 license, even if the file server is being used by many different users.

Supported Environments & Backup Destinations
